

## **Overview**

Fleetwood was contracted to design, in collaboration with NBRS Architecture, production shop drawings followed by fabrication and installation of the 18 MOD, 2 storey P5&6 education complex in metropolitan Sydney. The building incorporates various spaces such as general-purpose classrooms, library, administration and amenities facilities. The project involved comprehensive demolition and asbestos removal works and the inclusion of new amenities and facility upgrades to the adjacent church building.

## **Solution**

Fleetwood's role was to deliver a full turnkey solution which specifically included:

- Comprehensive demolition
- Asbestos removal works
- Refurbishment works
- Design and Construct
- Program management for all site logistics and civil works
- Traffic management

## **Benefits**

The collaborative approach between all stakeholders and consultants ensured the objective of a fully functional, modern and high quality early education facility was achieved. The modular solution saw time on site drastically minimised as the delivery and onsite works required at the school took place over the summer holiday period, which minimised disruption to the school calendar. The new building has also helped the school manage increasing enrolment numbers for years to come.
