

Overview

Fleetwood was contracted to manufacture and install a Child and Family Centre for the City of Whittlesea. The single storey building is environmentally sustainable and houses three early learning centre playrooms plus maternal and child health service ancillary facilities. The bespoke design was achieved through a collaborative effort between the client, architect, building surveyor and civil works consultants. The modern design features a high standard of fit out with tailor-made fittings and fixtures as a result of over 30 modules (1050m²) being manufactured and delivered to site.

Solution

The single storey building houses three early learning centre playrooms, a maternal health centre and ancillary facilities. The bespoke design was achieved through a collaborative effort between the client, architect, building surveyor and civil works consultants. The project resulted in over 30 modules being manufactured in Fleetwood's Bendigo facility and delivered to the project site with building now being leased by the council to a third-party child care operator.

Benefits

The collaborative approach between all stakeholders and consultants ensured the objective of a fully functional, modern and high quality early education facility was achieved. The City of Whittlesea and the current tenants have benefited from a high standard fitout with bespoke fittings and fixtures for the local community to also enjoy. The flexibility of going with a modular solution has allowed the council to potentially relocate the facility in the future as the demographics of the area change, which will extend the life of the building.
