

Overview

Fleetwood were engaged to design and construct a new 960m² double storey facility for St Philip's Christian College. The building serves as the New Middle School for the Newcastle Campus consisting of 12 open plan classrooms, fire rating walls and ceilings with a high level of internal finishes to go along with the external aesthetics designed for a permanent look and feel complementing the adjacent buildings.

Solution

The project was built and delivered over a 16-week period. In a first for the company the building was designed with concrete floors (ground and first floor) to sure up the structure and provide the durability of a permanent build, which will be part of a new design option moving forward for schools looking for added durability.

Benefits

With an increase in enrolments, the middle school required a new hub for its students in a fraction of the time of a traditional build. The school has also been able to make use of limited space on campus by building vertically and having connecting walkways to existing facilities, which will streamline foot traffic around campus.
