

# Canberra Hospital Building 28

**Client** Shape Australia  
**Project** Canberra Hospital Building 28  
**Location** Garran, Canberra  
**Services** Full Turnkey Solution

## Overview

Fleetwood Australia partnered with Shape Australia to design, manufacture and install Building 28 for Canberra Hospital located in Garran, ACT. The new two storey administration building is 1,200m<sup>2</sup> with lift and lobby area. We were engaged to provide a rapid build solution to achieve completion under very tight time constraints.

## Solution

Due to the short project completion timeframe, we delivered the building to site and then completed the cladding in situ to assist the principal contractor. This allowed more time with the building on site so our project partner could fit out the office and amenities over the Christmas period.

Building 28 was the first stage of the Spire project and was on the critical path for other major hospital upgrades.

## Benefits

- Maximum efficiencies on build were achieved by collaborating with the client to achieve target completion dates.
- A design and construct rapid build approach was used to swiftly deliver a high quality building solution.
- The client's exacting requirements were met using the Design for Manufacture and Assembly volumetric method, that enabled the overall critical path for the broader building program to be maintained.
