

Atlas Camp

Client	GR Engineering / Tellus Holdings
Project	Sandy Ridge Facility
Location	New South Wales
Services	Full Turnkey

Overview

Fleetwood Australia was selected by Tronox to deliver a full turnkey accommodation solution for workers at its Atlas-Campaspe minerals sands operation in central New South Wales.

The 152-room camp provides flexibility for growth and the project was delivered smoothly, despite manufacturing and delivery coinciding with some of the peaks of the COVID-19 pandemic. At its core is a bespoke kitchen/mess area that provides a genuine restaurant feel.

Solution

Teams from Fleetwood nationwide collaborated on this project. SA focused on the camp infrastructure, while WA provided transportable suspended slab concrete flooring.

The project highlights:

- Kitchen/mess area with a restaurant vibe
- Glyde technology for keyless room entry and climate control
- Spacious and comfy ensuite rooms
- Fully equipped modern gym
- Self-service laundry facilities
- Administration buildings, with on-site shop
- 152 rooms SPQ's for large workforces

The durability and wear resistance of the concrete floor were crucial, given the client's future expansion plans for the camp. Concrete and timber walkways connect the site buildings, improving accessibility and functionality for all.

Benefits

Tronox aims to create a home-away-from-home atmosphere at the Atlas-Campaspe camp for its workers. This drove the design and construction of the project. A key feature is the custom-designed kitchen/mess area, providing a hospitality-level experience. It includes custom-made booths with leather seats, LED lighting, wet-and-dry mess capabilities, and a quiet "café-library" section.

Atlas-Campaspe showcases Fleetwood's expertise in delivering modern, technology-enabled camps across Australia. With Fleetwood's Glyde IoT technology, residents can check in, access their rooms, and control climate through smartphones. The camp offers spacious rooms with ensuites, a fully equipped gymnasium, and an on-site shop.
